What's new: The dialogues are centered inside the WinRAR window in the same way as WinRAR 5.80 5.80 not inside the entire screen as in WinRAR 5.90. When editing an archived file with external software, additional steps are taken to reduce the likelihood of interfering with the publisher and opening its temporary files when the publisher may still need it. The Version to extract field in open archival properties from the Windows Explorer context menu provides additional information about zip compression and encryption algorithms, such as LZMA or AES. This information was already available in the WinRAR Info command, but missed in the archival information accessible from Windows Explorer. The host OS types MS DOS and Unix are recognized and included for the LZH archives in the Info command. Previously, the host OS field was still unknown for the LZH archive format. Files created by the external editor and corresponding to the Parameters/Viewer/Ignore masks are never added to the archive. Previously WinRAR would add them again if some files that did not match these masks were also created or modified. Fixed bugs: The empty file names were displayed inside some Unix LZH WinRAR archives could not process more than 999 volumes of 7z in one set if the user canceled the user account control prompt after changing the option Integrate WinRAR into a shell, a new state of this option has been displayed in the Settings dialogue, even if the actual state of the shell integration has not been changed the size of the main window might be too small on the first series after own installation without previous WinRAR version presents WinRAR could stop responding after editing an archived file with external software in Windows 10 version 2004. 2004.
